PROJECT INTRODUCTION

- Project Name: IoT-Based Smart Health Monitoring System
- Objective: To monitor patient health parameters remotely.
- Parameters Measured: Heart Rate, Body Temperature, SpO2, Blood Pressure.
- Technology Used: ESP8266/ESP32, Sensors, Cloud Database, Mobile App.
- Purpose: Enable real-time health tracking and emergency alerts.

KEY PARTNERS

- Medical Device Suppliers
- IoT Hardware Manufacturers
- Cloud Service Providers (AWS, Firebase)
- Hospitals and Clinics
- Health Insurance Companies

KEY ACTIVITIES

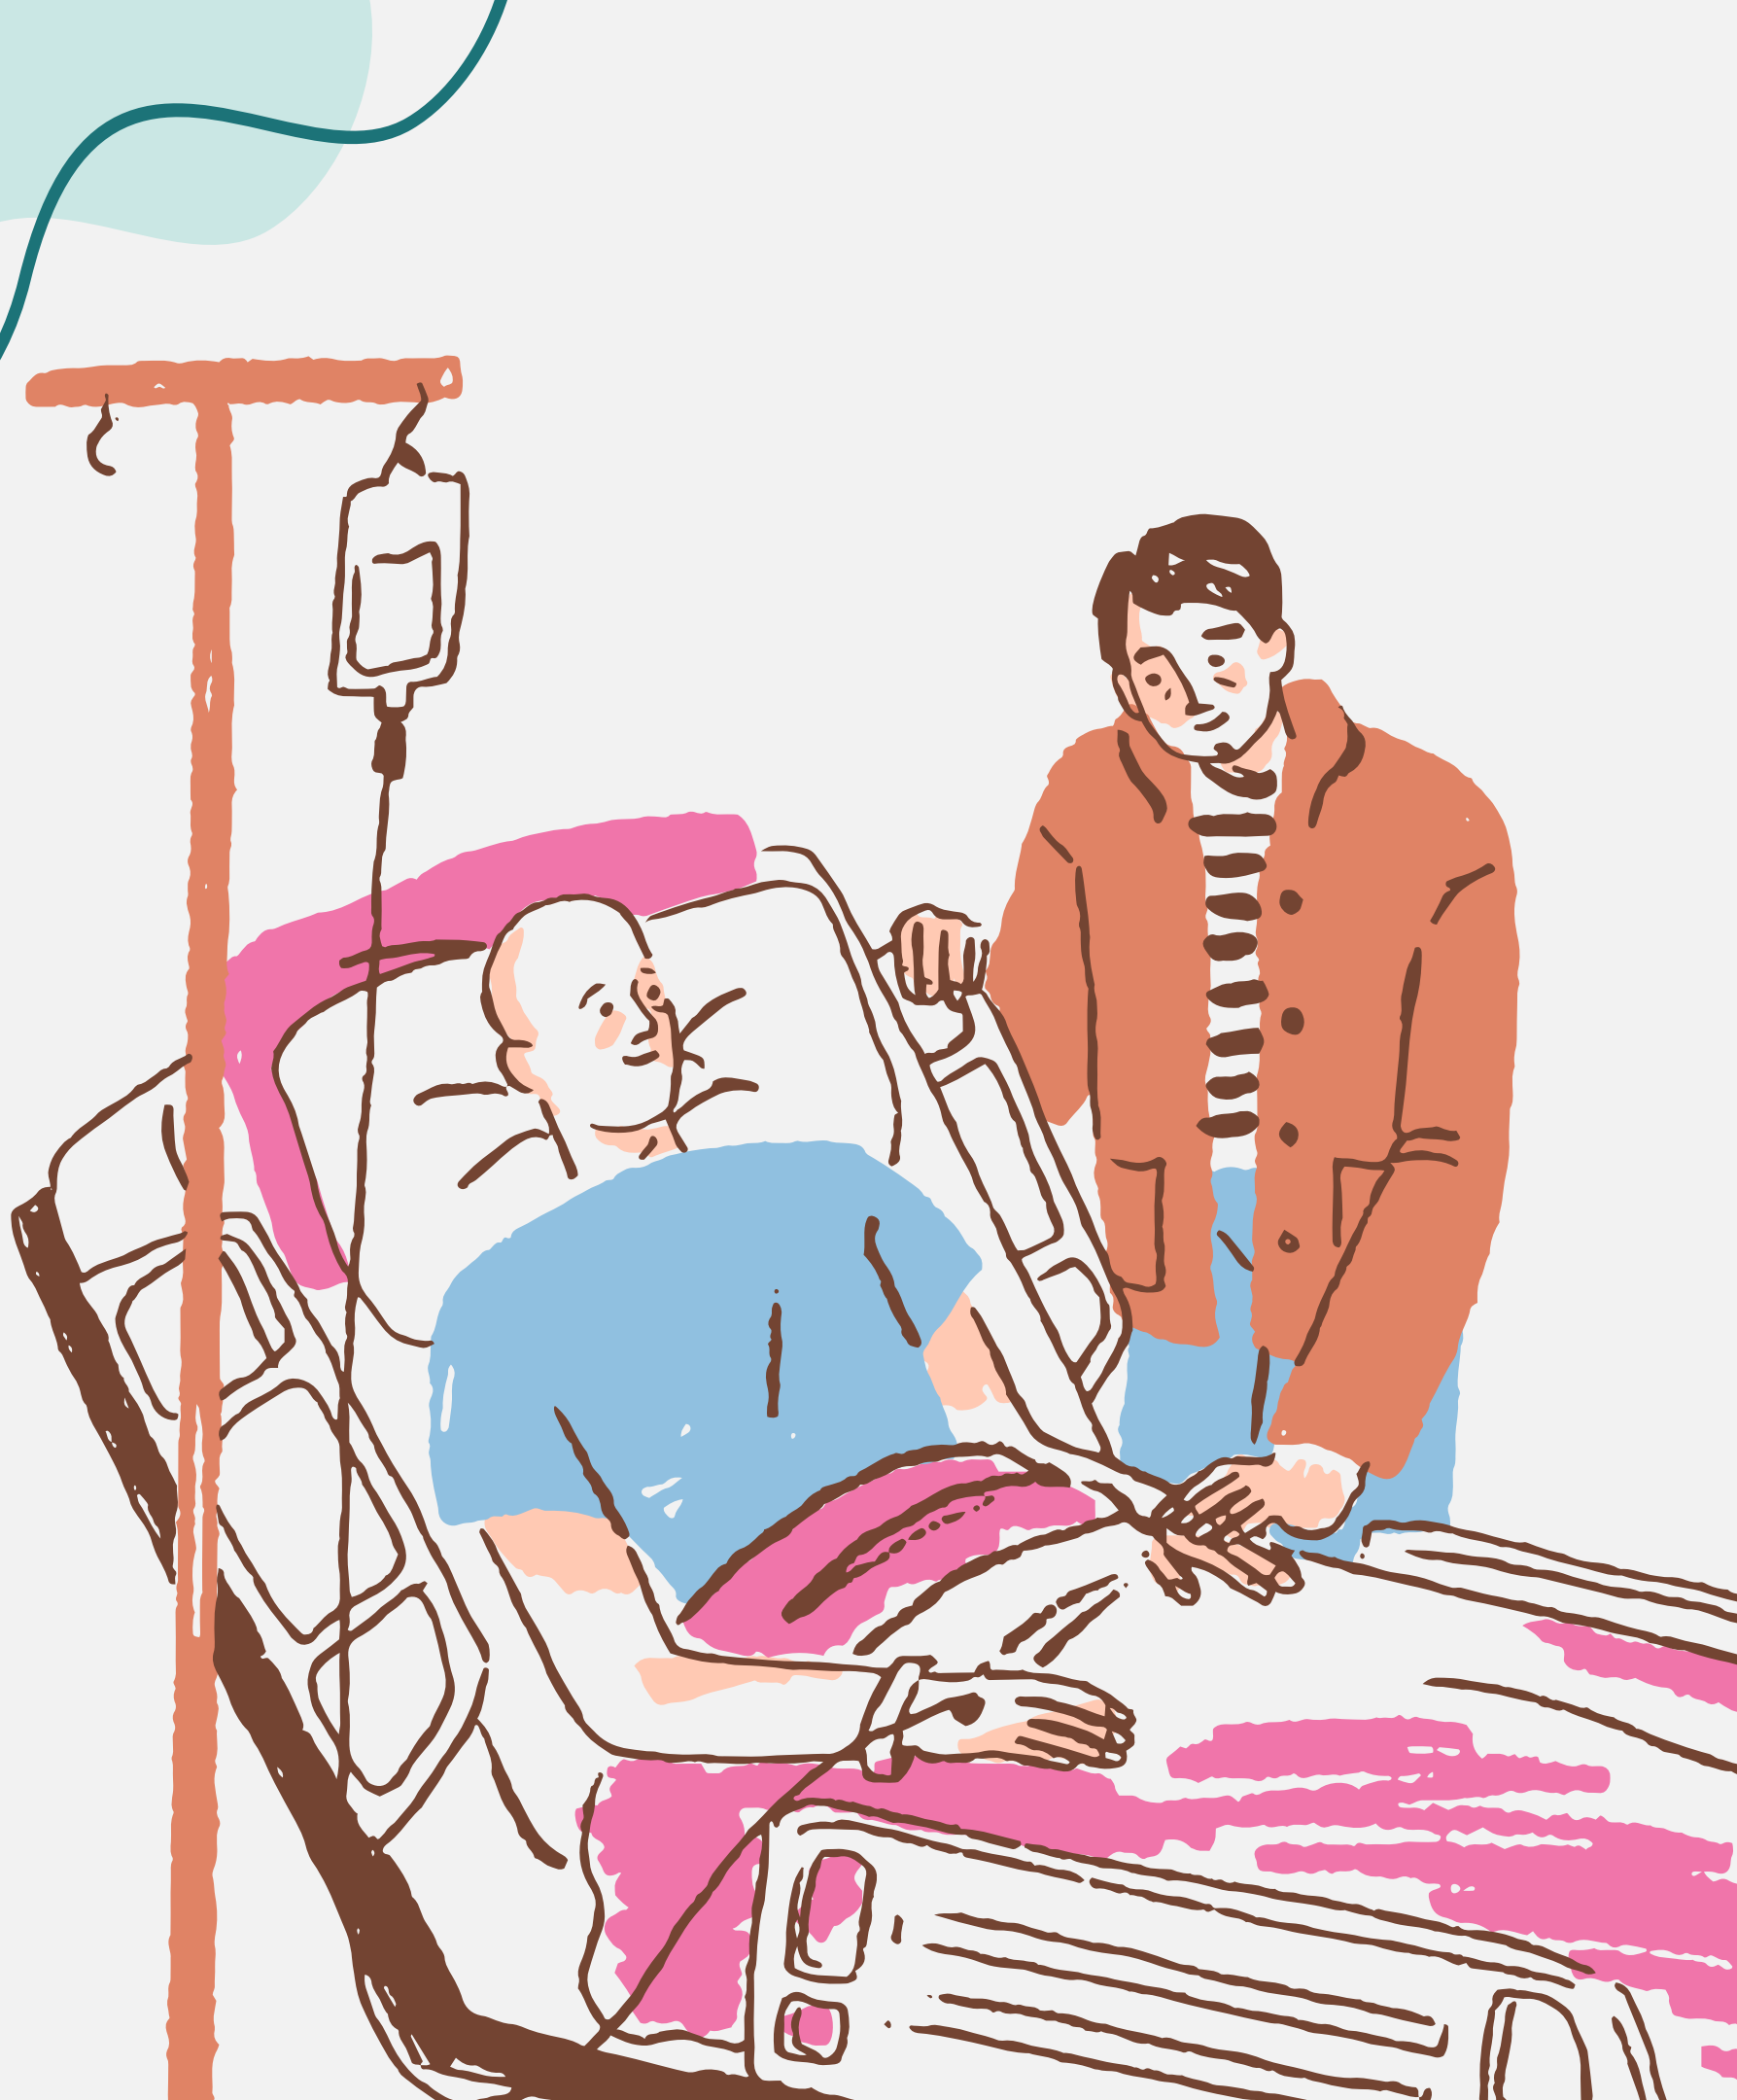

- Device Design and Development
- Health Data Monitoring
- Cloud Data Processing and Storage
- App Development and Maintenance
- Customer Support Services

KEY RESOURCES

- Health Monitoring Sensors
- IoT Development Boards
- Cloud Infrastructure
- Mobile Application Platform
- Technical Development Team

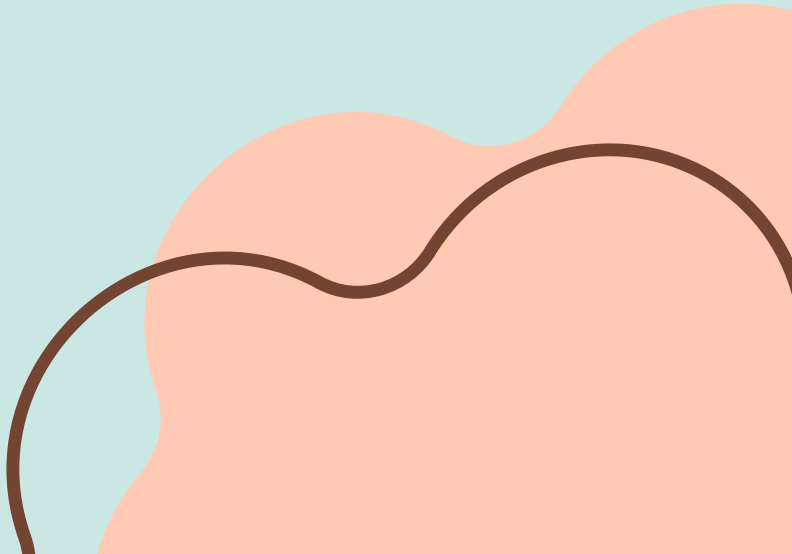

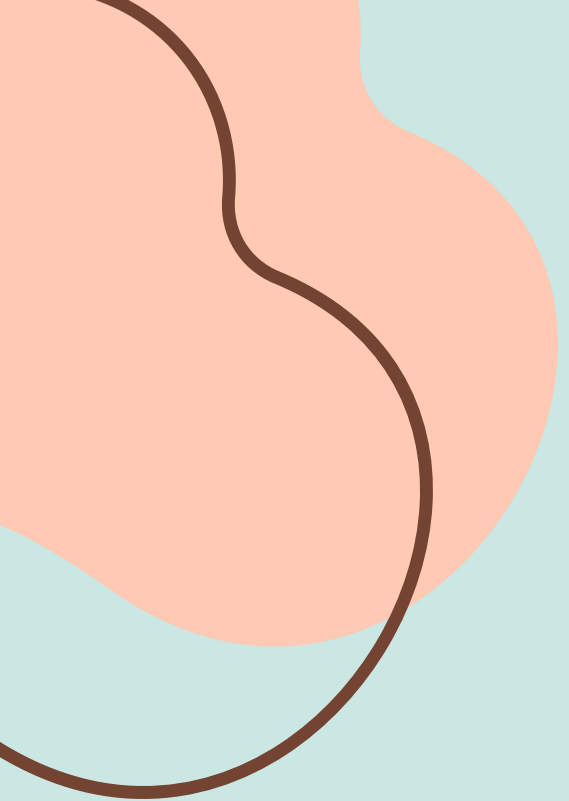

VALUE PROPOSITIONS

- Real-time remote patient monitoring
- Early detection of health risks
- Instant emergency alerts to doctors/family
- Reduced hospital visits
- Affordable healthcare solution

REVENUE STREAMS

- Device Sales
- Subscription-based Health Monitoring
- Annual Maintenance Contracts
- Hospital Partnerships
- Data Analytics Services

THANKYOU
